ABSTRACT

The rapid increase in the era of the technological revolution and the Internet, especially the social media, have created a new reality in the daily life of the societies in general and of the university students in particular, so this new reality without any doubt imposes on us the general effects of this increasing use of social media has affected all areas and societies. The effects are positive and negative. These social means have become a vast space for exchanging ideas, making new friends, proposals, sources of information, business and e-shopping. In this study, we have decided to shed light on the academic, political and economic effects of the study by comparing them to the general effects of social media by looking at the demographic variables of Iraqi university students. Three universities (Kerbela University in the Middle Euphrates, UOITC University in the capital Baghdad and Tikrit University in western Iraq) where we considered spatial, cultural and social differences. Data collected through a survey consisting of four categories, General Influences, Academic Influences, Political Influences and Influences Business (distributed over 40 questions). We tried to cover most of the students' common uses of social media and their impact on them. The questionnaire was distributed through 100 questionnaires to each university. The total number of participants was (201) distributed on (77) participants from Karbala University, (50) participants from Tikrit University and (74) participants from the University of Information and Communication Technology (UOITC).

1. Introduction

In the last few years, evolutions have been trying an increasing interest in using the internet and communication technologies tool (ICT). Wide groups of applications and technologies were generated to support communication to others anytime and everywhere. Presently, the internet has become be a necessity for the world community. All people can reach all the information without any limitation, on time and place. Also, in the learning procedure, communication can be one of the determinant factors to gain success in the learning process. The use of ICT also can be given good impacts for learning process as well as to provide learning efficiency in order to help

students cooperate with other about the topic of the lessons because each one from them has different unique learning style [1]. Likewise, with respect to huge scale mobile social networking, users may have a place with various networks or groups, and covering clients may assume unique jobs in complex systems. From that point, the basic issue is the manner by which to survey or clarify client reliability. Under such a situation, trust induction assumes a significant job in the confided in the social linkage between (portable) users. To surmise the fluffy trust connection between clients in the enormous scale informal communication of covering networks, Chen et al. [2]. With the blast and thrive of social networks, common trust has gotten one of the essentials of all administrations in informal organizations. Since the foundation of the trust relationship is a confused and dynamic procedure that incorporates cooperation history, administration substance, reliable proposal, trust the board (TM), feeling and brain science, and so forth. TM framework should likewise be a mind-boggling arrangement of including multi-factors. In this way, how to fabricate a finished trust assessment model gets one of the most significant works for social networks [3]. Moreover, an enormous number of social network sites, instruments, and administrations cause it workable for individuals to be associated

with the (portable) Internet by means of an assortment of client terminals, whenever and anyplace. Accordingly, getting to data on-request to share and trade information assets become rather helpful, successful and far-reaching [4]. Notwithstanding orderly check messages on various social networks, perusing discourse or gatherings, also, consistently check papers, presently people moreover, checking profiles of them on social sites by subordinate others' changes, by posting their summery [5]. Research has shown that many folks hook up with SNS. From types of eLearning system that is increasing now is a social education. According Horton [6]. Mostly of people uses SNS for a range of more reasons "convenience, permitting fast updating, explore and share persistently big information, considering daily life, creating up and keeping up unaffected social contacts and connections, continuing easygoing learning rewords with collaboration and correspondence and empowering transport of guidelines are the principle ones". These thought processes illuminate why SNS are acknowledged rapidly regardless of the way that they at first had ascended with the inspiration driving sharing photos, person's information accounts, profiles, and related substance [7]. The unmistakable greater part of informal organization destinations is being utilized by the present youthful age particularly from a substantial segment of college understudies. Therefore, SNS is expected to assume a dynamic job in youthful ages step by step [8]. The association between the juvenile and their interest in SNS has entranced numerous sorts of research that focused on adolescent's activities in association with secretly concern relating in their utilization of interpersonal organization [9]. Since individuals meeting about and sharing needs energetically in interpersonal organizations, especially tendency to frame new gatherings and social occasions or looking into them derive. In those circumstances, individuals move as of beings un-involved customers to totally working people by conferring their assets and viewpoints to others whom they accomplish reasonably finally [10]. Thusly, this pleasant activity urges people to shape their identity despite their individual characters. It has turned out to be important to discover why everyone is pulled in towards interpersonal organization so effectively. What an individual search for when an individual uses an interpersonal organization? Research has been done by various individuals in regard to individuals' use of informal organization [11]. An outstanding essayist to be specific Ellison cites that informal community is being used by various individuals for killing timing, investigating persons and their ways of life have decent social networking and as an observation. Leading group of classes or colleges. Other than that, in conditions of work office, interpersonal organization assumes an imperative job. Becoming acquainted with about new extraordinary individuals, discovering their interests, or issues of governmental issues [12]. Web-based life catches the eye of the understudies and afterwards redirects it towards non-instructive and improper activities including futile visiting and outrageous web surfing. In light of the above proclamation, we can say that web-based life may seriously influence the examination propensities, scholastic life and learning encounters of the understudy (Kappuswamy and Shankar, 2010) [13]. Web-based life is an approach to impart online that can be utilized to associate, share data and team up with others. Web-based life can be like sites and applications [14]. The harmed instructive execution and web habit are connected through the usage of asynchronous correspondence program through the web locale and the fora. Jocaben et al. [15]. illuminated that informal organization is tending towards the business-related point of view, developing new associations, or leading to shared interests, for example, authoritative issues or music. Lockyer et al. [16] additionally exhibited that customers can bestow their very own information to the help profile page of them, interface with distinction usages, split sight and tag and

sound substance that they have created a relationship with others to an arrangement of accessible substance, begin or join subgroups of successive concern gatherings. Concede [17]. Social networks are an approach to impart online that can be utilized to connecting, share data and group up to other. Internet-based life can be like sites and applications [18].

2. Related works

In that review investigated the achievability of utilizing Facebook to enlist guardians of center school understudies to a self-guided family program to counteract immature medication use [19]. This exploration plans to look at how investing energy in Facebook influence understudies' scholarly execution [20]. In this paper learned about usage of internet systems administration and its effect on study. A poll overview was prosecuted to inspire ate information [21]. In this investigation, web content mining methods are utilized to decide famous internet shopping firms' Facebook designs. For this reason, 200 prevalent Turkish organizations' web URLs are utilized. Web content mining through normal language preparing methods is analyzed. Likeness examination and bunching are finished. Subsequently, the bunches of the Facebook sites and their connections and similitudes of the organizations are gotten [22]. In this paper we concentrated on Facebook statuses, which we can see as suppositions of clients or their response on the worry we need to break down. We create device status puller that naturally gathers arbitrary Facebook statuses. At that point we make classifier that performs arrangements on that corpus gathered from Facebook [23]. The target of this paper is to think about on the most popular long-range interpersonal communication website Facebook and other online web-based social networking systems (OSMNs) considering the idea of relationship or fellowship. This paper talked about the philosophy which can be utilized to direct the investigation of the informal community Facebook (FB) and furthermore characterize the structure of the Web Mining stage. Finally, different mechanical difficulties were investigated which were lying under the assignment of removing data from FB and examine in detail the about creeping operator usefulness [24]. The present investigation is led on the informal organization of Facebook, where content promoting, another type of advertising, is used and as opposed to presenting the merchandise, the substance of various products is introduced [25]. This examination goes for dissecting printed information from Facebook and endeavors to discover fascinating learning from such information and speak to it in various structures [26]. This examination is done as such as to highlight the potential outcomes of online life in the educational setting by aggregate learning and improve the understudies' academic execution. The results exhibit that aggregate adjusting decidedly and out and out with instinctive with partners, astute with instructors and duty which influence the understudies' academic execution [27].

In our work in this paper, and in line with the growing numbers and high demand for the use of social media and the multiple uses of these means where social media platforms today become shorten the time and ease of information exchange and promotional platforms we have seen the selection of four categories of analysis and evaluation (general category, academic category, political category, and business category) And in various social media we wanted to cover the most common uses of students in social media through a questionnaire containing multiple questions to which the research belongs to the university students and from different regions and universities in three cities and four categories age, both gender and more than academic level.

3. Methodology

The quantitative research design was selected as a major method of study. In a quantitative method, the researcher collects, analyzes and interprets Quantitative search is used to analyze data. The survey technique was developed through a structured questionnaire to collected data. In the viewpoint of Kumekpor [28] "social study might be said to be a target, quantitative way to deal with the investigation of the social procedures inside a well-characterized zone at a given time through at least one foundations by methods for a meeting plan, a poll, and the information in this way gotten related factually". Different data obtained from college students through the four effects sections (In General, political, academic and business) on them. The questionnaire will be a survey paper in the three Iraqi universities (University Kerbela, Tikrit university and UOITC university Baghdad) from students where the data collected and analyzed, and we faced challenges like in data collection stage because it was manually processed and from three different universities in different cities and some answer were not completed. Also, Demographic variables included age, gender, education level, After the completion of the collection of the survey papers were filled it in the pages of Excel tables and were encoded and converted into numerical values and were called through the program Jupyter Notebook and were analyzed by the language of Python using many of libraries Python language such as Numpy, Pandas, Matplotlib, SciPy, Seaborn and Scikit-learn. where the language of Python is language modern to get our results. The study included (201) students from three universities in Iraq (Kerbala University, Tikrit University and University of Information Technology and Communication). The aim of the study was to measure the impacts of social communication on these students through general, academic, political and commercial influences. We can see summary Statistics descriptive analysis used percentage to measure answers of respondents in (Table 1) below:

4. Results and disscusion

4.1. General results analysis

Here in this category, we include the general questions that we will review in the (Table 2) below:

We also review the results. Here, in the answer to the first question, we find that a clear majority believes that there are positive impacts on the utilize of social media. In the second question, many see themselves as vulnerable to privacy violations and black-mail while using social media. In the third question, we see a high percentage of those who sometimes see the possibility of social media negatively affecting their health and, to a lesser extent, In the fourth question, the answer was clear to a majority of those with a common belief that their use of the social media exposed

them to addiction. However, the answer to the fifth question gave us a significant majority who see the importance of social media as an important factor in awareness Society and in the sixth question, there is also an absolute majority do not use fake pages on social media. In the seventh question shows us the most widely used website by Facebook is very distinctive. In the eighth question, there are varying percentages of them who believe that the personal data is reserved, confidential and reliable on their accounts in the social media. The ninth question is that we have the impression that the majority of them easily use these means with the simple access to information. In question 10, Its negative media impact is negative on the real social community between family, relatives and friends. In this question, we conclude with the eleventh question that the nature of the use of these means of social communication is to browse in a majority and preference. We will see all these answers in detail illustrated in (Table 3 and Fig. 1) below:

4.2. Academic results analysis

Here in this category, we include the Academic questions that we will review in the (Table 4) below:

Here we try to review the results of the impacts of social media in the use of the academic aspect, where we indicate here in answer to the first question that the majority used the means of social media for academic purposes sometimes, and also shows us in the second question as well as the vast majority of those who follow the accounts of their universities on social media and in question Third, most see social media as an important source in their academic studies. In the fourth question, there are also varying ratios between those who see social media as an alternative source of scientific sources and what they see only sometimes. In question 5 there is also a majority that sometimes sees social media as a reliable source of academic information. In the sixth question, the majority shows that social communication is a means of reducing time, effort and money in obtaining academic information. In the seventh question, there is also unequal use of the means of social communication between teaching, teaching and learning together. In the eighth question, Facebook maintains the top of the most generally utilized web-based social networking, with reference to the great use of YouTube. We will see all these answers in detail illustrated in (Table 5 and Fig. 2) below:

4.3. Political results analysis

Here in this category, we include the Political questions that we will review in the (Table 6) below:

Fig. 3. (Political Answers).

We conclude by reviewing aspects of Business impacts using social media. Therefore, we note in the first question here that the use of social media for this purpose varies between use sometimes and non-use. In the second question, there is no interest and follow-up to the Business groups. In the third question, we find that there is not much time spent on Business use through social media. In the fourth question, the majority see their use being for sale and purchase together. In the fifth question, About normal shopping methods and compensation through e-shopping on social media. In the sixth question, we find that there is also great dissatisfaction with the clear majority of commercial Ad. In the seventh question, it is sometimes thought that the promotion of products through these means is effective, or in the eighth question, we also have confidence in the process of shopping and

Fig. 4. (Business Answers).

electronic payment through Social media. In the ninth and last question, Facebook also maintains its status as the most widely used site among social networking sites.

We will see all these answers in detail illustrated in (Table 9 and Fig. 4) below:

5. Conclusions

In our study, we found that there is a generally positive impression among students about social media. There is also a great interest and increasing use of these social media for academic use. Many of them do not want to use it for business purposes and do not see the possibility of adopting e-shopping as an alternative to regular shopping. In the political aspects, with their conviction of the extent of the influence of social media in the possibility of changing political events and maybe a dangerous factor in this area, but they also have no desire to participate and follow up the use of social media. For this reason, we should focus on the academic aspect and the range to which students respond to the utilization of social media in their scope and academic studies. This is very encouraging by focusing on making these platforms a reliable educational platform, for example, Academic and activate this aspect and focus on it through the recommendations of stakeholders in the academic field we must not overlook negative aspects such as impact it is necessary to note the negative effects on health, especially addiction and the use of social media. It is noteworthy that Facebook is the most common and the most popular and most common among all these means social communication, which was presented in the questionnaire with a clear and noticeable advancement of YouTube in the academic field only, which enhances the possibility of using it for academic purposes reliably by academic institutions. In future, we can expand this study through by taking other societies and countries and achieve a comparative study among them. We also can do a survey for other stakeholders sides like faculty staff members and employers to improve the performance of our future studies.
